

The Bracket System

DeckLok is a bracket system that secures deck components to the structure of the deck that is revolutionizing the deck industry. This patented bracket system strengthens the vulnerable connections between deck components by adding a bolted attachment at critical structural locations. The DeckLock bracket system provides the strength required to meet the new IRC 2003 Safety Code requirements for both lateral pullout and rail post stability while using your current deck construction techniques and designs. Our bracket is available in code compliant Hot-Dip Galvanized and in ACQ compatible Stainless Steel, also used on boat docks and other seacoast applications.

Is Your Deck Safe?

Build In Safety - Lok It In!

Ledger Boards

Decklok anchors the ledger board to the floor joists of the house to provide tremendous lateral support and resistance to deck pullout and collapse. This **patented design** ensures structural stability and longevity for the ledger board attachment. Independent testing has show that two DeckLok brackets provide up to 4,000 pounds of lateral resistance! Attach your deck with shear strength, by bolting to the house joists with DeckLok.

Stair Stringers

The DeckLok bracket is designed to reinforce the connection between the stair stringer and the deck frame to reduce the possibility of the stairs shifting away from the deck. The DeckLok bracket design adds rigidity and strength by creating a bolted connection to the deck floor joists and band board. Using the versatile Decklok bracket to secure stair stringers provides long term confidence that, as time goes on, your work will stay firmly attached.

Railing Systems

When added to railing systems DeckLok brackets provide tremendous strength to the connection of the rail post to the deck making your railing system code compliant. Our brackets are compatible with common construction techniques and use some of the same bolts already employed to attach the rail posts to the deck. The addition of two through-bolts provides a 500% increase in strength to the rail post connection. This greatly reduces the risk to the builder and homeowner. DeckLok brackets are easy to install and can be used on almost any rail post configuration.
