MoistureShield® Vantage Collection™ ProSeries Decking

Featuring Advanced Environmental Recycling Technologies' (A.E.R.T.) new TecShield technology, MoistureShield Vantage Collection ProSeries deck boards are made with smaller wood fibers for improved appearance and durability, and a new embossing technique to minimize build-up of dirt and debris while simulating the look of wood boards.

Offering design flexibility, MoistureShield Vantage Collection ProSeries decking allows contractors to install the deck boards in applications where they are on or in the ground or under the water, without voiding the limited lifetime warranty. Adding to its versatility, Vantage Collection ProSeries decking is reversible and available in eight, fade-resistant colors, multiple lengths and with or without grooves for hidden fastening systems. While the ProSeries was unveiled at IBS, product availability is scheduled for the third quarter.

Enduris Encore™ Railing System

Enduris announces Encore™, a new code-approved, vinyl-coated composite railing system. Designed to complement Endeck® code-approved PVC decking, the new line of low-maintenance railing, has met stringent third-party audit and testing requirements, and is supported with a Limited Lifetime Warranty.

The railing system is available in three popular styles, and comes as a kit in a box, complete with balusters, hardware and easy-to-follow installation instructions. Posts are designed to go over 4x4 treated wood uprights, and are sold separately. There are matching accessories, such as post caps and skirts, as well as special brackets and hardware for stair applications.

Endeck® co-extruded decking is all PVC, and is CCRR certified to meet or exceed AC10 and AC174 standards. Endeck has a two-sided natural woodgrain embossed surface for easy reversibility. The decking is engineered to be scratch-resistant, mold-resistant and slip-resistant, and carries a Class-A flame spread.

CAMO™ Hidden Deck Fastening System from National Nail

CAMO is said to be the first hidden fastening system designed to attach a wide range of decking products—ranging from treated lumber, hardwood, cedar, composite and PVC deck boards—directly to the substructure, creating a

fastener-free deck surface. Unlike systems that are exclusive to specific boards, CAMO is engineered to work with virtually all solid and grooved deck boards with no pre-drilling required. The patented CAMO system includes proprietary deck screws and CAMO Marksman™ tools. The screws combined with a Marksman tool enable a distinctive side-angle entry that secures the deckboard directly to the joist reducing board movement and allowing the screws to back out easily in the event a board needs to be replaced. CAMO deck screws, a specially designed driver bit, a Marksman tool, and a cordless drill are all that are needed to install a deck board.

TAMKO's Lamarite Composite Slate Shingles in Blended Bundles

TAMKO's latest product addition has the installer in mind. The new blended bundles take the guess-work out of blending colors for a natural-looking composite slate roof by combining two different colors in proportional amounts in the same bundle. According to the company, the blended bundles may also

reduce waste and save money by reducing the amount of opened, but not fully used bundles. This is possible because installers can order the total number of bundles without having to guess at how many of each color to order.

Lamarite Composite Slate Shingles are available in 5-, 7- and 12-inch widths, are listed for UL Class A fire resistance and Class 4 impact resistance and come with a 50-year limited warranty. www.tamko.com
